INTRODUCTION

This report is the 25th anniversary volume in what M. W. Chambers called "the CHAMBERS longitudinal study of state tax support of higher education in the United States." Following the death of Dr. Chambers late in 1965, the data collected and reported is being continued by the Center for Higher Education at Illinois State University with Robert Stone as Editor and Gary France as Managing Editor.

PERCENTAGES OF TWO-YEAR GAINS IN APPROPRIATIONS OF STATE TAX FUNDS FOR ANNUAL OPERATING EXPENSES OF HIGHER EDUCATION IN THE FIFTY STATES, FISCAL 1987 OVER FISCAL 1985

## INTRODUCTION

This report is the 28th consecutive volume in what M. M. Chambers called "the GRAPEVINE longitudinal study of state tax support of higher education in the United States." Following the death of Dr. Chambers late in 1985, the data-collection and reporting is being continued by the Center for Higher Education at Illinois State University with Edward Hines as Editor and Gwen Pruyne as Managing Editor.

### A RETROSPECTIVE OF FISCAL YEAR 1987

The most evident features in state tax support of higher education in FY1987 were as follows: there was an increase of nearly two billion dollars over FY1986; it was the second consecutive year where state support exceeded 30 billion dollars annually; and after two successive years of positive two-year percentage gains there was a decline in the rate of gain over the previous period.

As demonstrated by the figures shown below, the lowest single-year and two-year rates of gain in a full decade occurred in 1984. In 1985 and in 1986 there were strong increases in rates of gain for higher education (16% and 19%, respectively). While 1987 showed a demonstrable gain of 14% in the support of higher education, the rate of gain slowed. Part of this was due to the fact that none of the states experienced two-year increases of more than 40%, but five states showed negative increases over the two-year period. As shown on the map, these five states in combination with seven others comprised the lowest 12 of the 50 states in two-year gains. They depict a broad arc reaching from Alaska, Montana, and Wyoming in the Northwest; to the farm states of Iowa, Nebraska, Kansas, and Wisconsin in the Great Lakes Region; then south to a cluster of New Mexico, Texas, Oklahoma, Louisiana, and Mississippi. Economic stress involving oil and energy, farming, and the wood and mineral-related industries explain much of the fact that these 12 states were the nation's lowest in percentages of two-year gain for higher education. Some of these states, additionally, had been among those exhibiting the strongest rates of gain in recent years. Since FY1981, Alaska was among the top gainers from 1982 through 1984, had a moderate gain in 1985, and was among the lowest gainers in 1981, 1986, and 1987. In the initial four years of this period, Texas was in the top

TABLE 1

Fiscal Years	1977	1978	1979	1980	1981	1982	1983	1984	1985	1986	1987
Billions of Dollars	13.9	15.3	16.9	19.0	20.9	22.9	24.2	25.5	28.0	30.7	32.4
1-Year Gain %	9	10	10	12	10	10	6	5	10	10	6
2-Year Gain %	24	20	22	24	23	20	16	11	16	19	14

group, had moderate gain in 1985, and was in the lowest group during the most recent two years. Mississippi had five years of moderate gains and two years in the lowest group (1985 and 1987). The trend in Montana was similar to Alaska, and the trend in Louisiana was similar to Texas.

This general "ebb and flow" pattern of higher education support may be observed in most states with possibly two exceptions. States undergoing a massive build-up or expansion of a higher education system will tend to be among those having consistently top gains, and Texas and Alaska were in this grouping fairly recently. Major expansion of state higher education systems is a characteristic of the 1960's, however, and is largely completed in the 1980's. States having very large higher education systems involving major percentage gains for higher education tend to be the most populous states, and these are the states that individually contribute more than a billion dollars annually for higher education. There are nine of these higher education "megastates." California was the first state to break the billion dollar mark for higher education in FY1973, followed by New York in FY1975, and Texas in 1978 (surpassing New York in 1984). Illinois joined in 1984, and in 1985 both Florida and Michigan passed the one billion dollar mark. Three additional states exceeded this mark in 1986 (Ohio, North Carolina, Pennsylvania), and none joined the grouping in the current year, although Virginia and New Jersey are approaching with annual higher education appropriations of approximately \$900 million.

#### A REGIONAL VIEW USING QUARTILES AND QUADRANTS

While single year changes are of interest, GRAPEVINE has utilized two-year percentage gains because of the advantage of a longer view over a two-year period and leveling the effects of sudden one-year shifts. Table 2 shows these two-year gains for the nation, arranged in quartiles and quadrants. Quartiles make use of the range of changes from the greatest current increase in Maine (37% over two-years) to Alaska's -11% two year change. Quadrants divide the nation fairly evenly into four portions with the northeast corner of Missouri at the center, the Mississippi River dividing East from West, and the Ohio River and southern border of Pennsylvania dividing Northeast from Southeast.

TABLE 2

Quadrants	NW	NE	SE	SW	TOTAL
Quartiles Top	0	7	4	2	13
2d	3	3	3	3**	12
3d	3	3	4	3	13
Lowest	5*	1	1	5	12
Total	11	14	12	13	50

\*Includes Alaska  
 \*\*Includes Hawaii

Using quartiles, the 50 states were arranged in descending order. Thirteen are in the top quartile ranging from 37% to a 20% two-year gain. The second quartile ranges from 19% to 15% and the third quartile include 13 states with gains between 14% and 9%. The lowest quartile includes 12 states from Wisconsin at 8% to New Mexico and Nebraska at 2% followed by five states with negative percentages, indicating actual decreases. The weighted national average gain was 14%.

The notion of quadrants helps focus on regional groupings and variations. The 11 Northwest states have none in the top grouping, but they are divided evenly between the 2d and 3d quartiles, and the lowest quartile. An opposite pattern is seen in the Northeast with seven states in the top group (Maine, New Hampshire, Massachusetts, Ohio, Michigan, Connecticut, and Indiana), six states in the middle groups, and only Wisconsin in the lowest group. The Southeast is divided evenly among three groupings, including four states in the top (Virginia, Florida, Tennessee, North Carolina) three in the second quartile, and five in the 3d and 4th quartiles combined with only Mississippi being in the lowest quartile. The Southwestern states have their largest grouping in the lowest quartile (Oklahoma, Kansas, New Mexico, Louisiana, Texas) with even groups (two or three states each) in the other three quartiles. Southwestern states in the top quartile included Nevada and Arizona.

#### ANALYSIS OF CURRENT STATE HIGHER EDUCATION SUPPORT

Limitations of the data collected and reported in monthly issues of GRAPEVINE make a comprehensive analysis with precise comparability impossible. The consistent hallmarks of GRAPEVINE are timeliness and prompt availability of data. We encourage continued analysis and refinement of the data. Attention is called to other studies by Halstead and the State of Washington's National Comparison study as well as the McCoy-Halstead report when they become available at a later time.

Two additional features of GRAPEVINE give focus to the effort, but represent limitations to the data. These data are published as soon after the end of the legislative year as possible, but increasingly states are making revisions in appropriations during the 12-month period following the initial legislative action. In some cases, these include enhancements and in other cases they include rescissions and adjustments made either by a state legislature or by a governor. These revisions are now incorporated into the publication of the data in THE CHRONICLE OF HIGHER EDUCATION in October and in the NASULGC annual report the year following their initial publication. Beginning in 1987, the NASULGC report will contain two columns of data rather than only a single column of current fiscal year data as has been the case for the past 26 years. The other feature of GRAPEVINE is that only state tax funds are included and not other revenue sources such as student tuition and fees, federal funds, and non-tax sources appropriated by the states. These limitations must be kept in mind when analyzing and interpreting GRAPEVINE data, and this is especially true currently when appropriations from tax sources may tend to be "flat" because of the limitations in revenue capacity in many of the states. States increasingly are utilizing revenue sources other than tax funds. It may well be that in the

TABLE 3

13 Top Quartile States			12 Bottom Quartile States		
State	General Fund* Increase %	Higher Education 2-Year Gain %	State	General Fund Increase %	Higher Education 2-Year Gain %

\*"Projected Growth Rates of General Fund Revenues, FY 86 to FY 87," Table 4 in Stephen D. Gold et al., STATE BUDGET ACTIONS IN 1986, Denver, Colorado: National Conference of State Legislatures, September 1, 1986.

states exhibiting negative gains utilizing only GRAPEVINE data, the overall gain for higher education may be positive if all revenue sources are taken into account.

With these important caveats and limitations in mind, we can move beyond description of the FY1984 data to analysis of the major factors contributing to the nationwide configuration which has been described.

Geographic Location. Analysis based only on a state's location within a region is too simplistic for a full picture, although observations can be made using these data. It would appear that substantial economic recovery has taken place in 14 Northeastern states. Ten of the 14 are in the upper half of the states using two-year gain figures. In New England, Maine, New Hampshire, and Connecticut are above the national mean of 14%, as are New Jersey and New York in the Mid-Atlantic states, and all four Great Lakes States with the exception of Wisconsin. A number of these states in the "rust belt" experienced early and prolonged economic stress and high unemployment, resulting in competing demands on state budgets, and difficulty in strongly supporting higher education and other areas as well. Florida, North Carolina, Tennessee, and Virginia continue to lead the Southeast with the other states near or below the national mean. Revenue difficulties associated with the farm economy continue to cause problems in this region. The Northern Plains states fared relatively well even in the face of a flat economy while other states in the Plains or Mountain region had serious difficulties, often related to a sagging farm economy. California, Nevada, and Arizona made strong two-year performances.

State Revenues and Taxes. Another part of the economic and fiscal picture in the states becomes evident when examining the size of the states' general fund revenues, recent decisions on taxes, and education expenditures. Drawing upon the work of fiscal analysts at the National Conference of State Legislatures, the table shown above incorporates the sizes of the projected growth rates in general fund revenues from FY1986 to FY1987 and the two-year percentage gains using GRAPEVINE data for the 13 states in the top quartile and the 12 states in the bottom quartile. It is clear that the availability of general fund revenues is a critical determinant in the capacity of states to support higher education. Admittedly, the correlations are not perfect. Both Connecticut and Michigan had small gains in general fund revenues while giving strong support to higher education. On the other hand, Kansas had a strongly positive projection for growth in general fund revenue and appeared in the bottom quartile of the states. Undoubtedly, some of the explanation of the above is accounted for by the fact that Connecticut and Michigan had relatively strong fund balances of at least five percent at the end of FY1985, while Kansas had a fund balance of less than five percent at the same time.

There was less change in state tax policies in 1986 than any year since 1980, according to NCSL. While 16 states raised taxes, the magnitude of the raises tended to be small. The decreases were in the Northeast where the economy was relatively strong, and substantial increases tended to occur where economic conditions were weakest.

Education Appropriations. State appropriations for elementary-secondary education, combined with higher education, represent a majority of the funds available in state budgets. The "education reform movement" began in elementary-secondary education during 1982, and now has moved to higher education especially in reforming undergraduate education, clarifying the mission and purpose of individual colleges and universities, and linking higher education to economic development, job training or retraining, and technology. Much of elementary-secondary education is guided by state mandates, and it was not unexpected to observe state budgetary decisions for local public schools occurring simultaneously or earlier than state budgetary decisions for higher education. It was noted by NCSL that state spending for elementary and secondary education "fared considerably better than higher education spending this year" (NCSL, 1986, p. 28). In 1986, nine states increased spending for elementary-secondary versus seven states increasing higher education spending more than 10%. Spending for K-12 grew faster than general funding spending in 26 states in 1986.

The weighted national mean gain of 14% was a clear increase for higher education, but represented a slower rate of gain than was observed in this report for the past two years. Some larger economic issues are related to this slower rate of gain. Rates of gain for higher education of more than 20% were common during the 1960's and 1970's. At that time, annual rates of inflation were often in excess of 10%, sometimes more than 15%. Since 1980, inflation has decreased to a consistent rate of under five percent per year. Thus, some slowing in the higher education rate of gain would be expected and has occurred, but state support for higher education has outpaced inflation by more than two-to-one. The states now experiencing negative decreases in rates of gain for higher education are in a particularly severe condition of economic and fiscal stress.

If one deletes the five states showing a negative rate of gain for higher education this year, the weighted national mean gain for the remaining 45 states is 17%, a rate nearly equal to the 19% rate of two-year gain reported by GRAPEVINE one year ago.

By far most significant in the pattern of state expenditures for higher education, however, is not competition with elementary-secondary or attempts to rationalize negative gains, but rather the particular features of higher education appropriations this year. The most significant feature was spending increases for categorical purposes, rather than general and incremental increases in campus operating budgets. These categorical purposes are similar to those reported in GRAPEVINE a year ago: spending increases for economic development, job training including teacher training, and technology. This year, spending increases were observed for student aid, minority access, teacher training, and incentive funding for excellence and measurable productivity gains. The primary purpose of GRAPEVINE is to report aggregate state totals, not specific categories, so our observations in these areas need to be viewed as partial and preliminary. Nonetheless, strong spending increases for student aid (more than twice the two-year rate of gain than for the state total) were observed in Arkansas, California, Georgia, Kentucky, Ohio, Tennessee, Washington, and Wisconsin with nearly equally strong rates of gain in Maine, Massachusetts, Michigan and Illinois. In a number of states, there were increases targeted for teacher education, recruiting new teachers into underserved subjects, and increasing access to higher education for minorities and disadvantaged students.

Incremental increases in campus operating budgets are giving way to funding for specific programs which are designed to accomplish objectives that can be measured and are related to larger state purposes. Examples abound in the states. Programs for excellence in education, scholarship, research, and productivity improvement were funded for the second consecutive year in Ohio. Indiana and Tennessee have endowments for higher education. Missouri initiated programs of supplemental funding designed to enhance campus missions and make specific contributions to the state's economic priorities. New Jersey has moved beyond a formula-based, enrollment-driven funding system to a "base plus priority incentive funding system" having three distinct features, including reallocation, challenge grants, and incentive grants. Campuses are reallocating resources in order to achieve goals such as enhancing physical plant expenditures and limiting salary expenditures to a percentage of the base budget. Challenge grants stimulate institutions to sharpen the missions and improve quality in the state colleges. Incentive grants enable campuses to compete for new dollars which can be put into high technology, humanities, foreign languages, international education, and the Fund for the Improvement of Collegiate Education (patterned after the federal FIPSE program). The commonalities in these incentive programs in the states include requiring specific institutional initiatives to obtain funds, linking specific outcomes with program improvement and excellence, and helping states to improve economic and employment opportunities. Far more significant than helping states temporarily get through difficult fiscal times, these programs signal a new dimension in higher education financing which may well be the bellwether for future state support of colleges and universities.

### ACKNOWLEDGMENTS

For the third consecutive year, a meeting of the GRAPEVINE Advisory Committee was held. This year the meeting was held concurrently with the Annual Meeting of the State Higher Education Finance Officers' Association in August. The SHEFOs are indispensable as providers of the data appearing in GRAPEVINE, and without their interest and assistance, as well as that of the network of GRAPEVINE correspondents in the 50 states, this monthly research report could not exist. Thanks are extended to the Office of Communications Services at the National Association of State Universities and Land-Grant Colleges for their assistance and support in publishing this annual report as they have done each of the preceding 26 years.

GRAPEVINE continues to work with other national collectors of state higher education finance data. It is recommended that the reports by these individuals be used. They include HOW STATES COMPARE IN FINANCING HIGHER EDUCATION by Kent Halstead, the State of Washington's NATIONAL COMPARISON OF FINANCIAL SUPPORT OF HIGHER EDUCATION, and HIGHER EDUCATION FINANCING IN THE FIFTY STATES by Marilyn McCoy and Kent Halstead.

As Editor of GRAPEVINE, I want to express my appreciation to those many readers and users of the research report who have provided invaluable technical assistance as well as support as I continue the work of M. M. Chambers. To Gwen Pruyne, I owe a particular debt of gratitude for the way in which she has provided expert advice along with a great sense of humor. The invaluable microcomputer expertise of Edna Schack is gratefully acknowledged.

DATA REVISIONS

One of the most significant improvements in GRAPEVINE in recent years has been the incorporation of revisions to the data which occur subsequent to the initial legislative appropriation. Until the late 1970's, the issue of data revisions was virtually non-existent and occurred only sporadically. Since the late 1970's, there have been a number of states, sometimes as many as half of the states, which have made revisions to the initial legislative appropriations of state tax funds for the operating expenses of higher education. These supplemental decisions may be made by a legislature or by a governor, and the decision may result in either enhancements or reductions in the original appropriations. For analytical and research purposes, GRAPEVINE will incorporate as many of these revisions as possible, including publication of the 50-state data in THE CHRONICLE OF HIGHER EDUCATION in October and in the NASULGC report which is published early in the calendar year.

Beginning with this issue of APPROPRIATIONS OF STATE TAX FUNDS FOR OPERATING EXPENSES OF HIGHER EDUCATION, there will be two columns of figures for each state: one column contains the most current data available for the present fiscal year (in this case FY1987) and the other is for the preceding fiscal year (in this case FY1986). By publishing both columns of data, it is anticipated that analysts and researchers will be able to utilize the most accurate and current data available.

### WHAT THE FIGURES ARE INTENDED TO MEAN

The data for this report are supplied by key persons in each state who report them to the monthly research report, GRAPEVINE. The ground rules used to achieve an approach to uniformity of reporting are enumerated below. Diversities of practice among the 50 states make it impossible to eliminate all inconsistencies and to accomplish absolute comparability among states and among institutions. We emphasize that comparisons are of limited usefulness but have value if correctly interpreted.

1. Report only appropriations; not actual expenditures.
2. Report only sums appropriated for annual operating expenses.
3. For the state tax appropriations, in complex universities, set out separately the sums appropriated for (or allocated to) the main campuses, branch campuses, and medical centers (even if on the main campus). The medical center item should include operation of colleges of medicine, dentistry, pharmacy, nursing, and teaching hospitals, either lumped as one sum or set out separately as preferred.
4. Include:
  - sums appropriated for state aid to local public community colleges and for operation of state-supported community colleges, and for vocational technical two-year colleges or institutes which are predominantly for high school graduates and adult students.
  - sums appropriated to statewide coordinating boards or governing boards, either for board expenses or for allocation by the board to other institutions or both.
  - sums appropriated for state scholarships or other student financial aids.
  - sums destined for higher education, but appropriated to some other state agency. Examples: funds intended for faculty fringe benefits may be appropriated to the State Treasurer and disbursed by that office; certain funds for medical and health education may be appropriated to the state department of health and disbursed from that department. Sometimes these sums have to be estimated because the exact amount disbursed cannot be known until after the end of the fiscal period.
  - appropriations directed to private institutions of higher education at all levels.
5. Exclude:
  - appropriations for capital outlays and debt service.
  - appropriations of sums derived from federal sources, student fees, auxiliary enterprises, and other non-tax sources.
